

PROBLEM STATEMENT:

A valid mobile number is a ten digit number starting with a 7, 8 or 9.

Concept

A valid mobile number is a ten digit number starting with a 7, 8 or 9.

Regular expressions are a key concept in any programming language. A quick explanation with Python examples is [available here](#). You could also go through the link below to read more about regular expressions in Python.

<https://developers.google.com/edu/python/regular-expressions>

Input Format

The first line contains an integer N , the number of inputs.

N lines follow, each containing some string.

Constraints

$1 \leq N \leq 10$

$2 \leq \text{len}(\text{Number}) \leq 15$

Output Format

For every string listed, print "YES" if it is a valid mobile number and "NO" if it is not on separate lines. Do not print the quotes.

Sample Input

```
2
9587456281
1252478965
```

Sample Output

```
YES
NO
```

PROGRAM:

```
import re
import sys

def validate_mobile_numbers():
    input_data = sys.stdin.read().splitlines()
    if not input_data:
        return
    n = int(input_data[0])
    for i in range(1, n + 1):
        if re.match(r"^[789]\d{9}$", input_data[i]):
            print("YES")
        else:
            print("NO")

if __name__ == "__main__":
    validate_mobile_numbers()
```

OUTPUT:

Congratulations!

You have passed the sample test cases. Click the submit button to run your code against all the test cases.

✓ Sample Test case 0

✓ Sample Test case 1

Input (stdin)

1	2
2	9587456281
3	1252478965

Your Output (stdout)

1	YES
2	NO

Expected Output

1	YES
2	NO
